EDUCATION

2009 – 2015
Institute of State and Municipal Management — Specialist in Public and Municipal Administration
Focused on management, process analysis, and strategic planning.
2016 – 2019
Spiritual Academy, Optina Monastery — Advanced Studies in Theology and Philosophy
In-depth study of philosophy, ethics, and methodology of critical thinking.
2019 – 2025
Independent Study of Science & Theology — Self-directed Research
Comprehensive exploration of physics, mechanics, programming, and theology. Developed skills in critical thinking, systems analysis, and interdisciplinary approaches.

TECH STACK

- TypeScript, JavaScript, Rust, Solidity, Python
- React, Next.js, Node.js
- REST APIs, WebSockets, event-driven systems
- GPU-accelerated inference, evaluation pipelines
- EVM, Solana, smart contracts
- Docker, distributed systems
- SQL / NoSQL databases

LANGUAGES

- English (Fluent)
- Russian (Fluent)
- Spanish (Intermediate)

PROFILE

Senior Software Engineer with 16+ years of experience building production web platforms, Web3 systems, and real-time interactive applications. Deep expertise in TypeScript/Node/Next.js, distributed backend architecture, and smart contract development (Solidity/Rust). Background in game development and real-time 3D systems. Strong physics-based, mathematical, and systems engineering mindset with focus on performance, security, and clean architecture. Delivered complex products from concept to scalable production environments.

WORK EXPERIENCE

Enlightened Minds | Partner, Lead Developer, Project Manager
2024 – 2025

- Led architecture and implementation of blockchain and AI-driven platforms handling 100K+ user interactions and high-concurrency backend workloads.
- Built and optimized scalable services, reducing latency by up to 30% and improving system reliability under load.
- Deployed containerized AI inference services with API-based endpoints, GPU-accelerated compute, and structured evaluation pipelines in production environments.

Freelance / Self-Employed (JP) | IT & Mechanics Specialist
2009 – 2020

- Founded and managed a repair and tech services business.
- • Built and optimized GPU-based compute infrastructure (up to 1200+ GPUs across multiple rigs and deployments).
- Upgraded RX 580 4GB to 8GB GPUs by modifying memory modules (BGA soldering).

Recaro & RRC (Russian Racing Company) | Assistant Mechanic & Co-driver
2008 – 2009

- Supported chief mechanic and director in motorsport operations.
- Designed and built racing tracks at Tushino airfield.
- Repaired and tuned Ferrari, Formula-1 cars, and karts.

Mitinsky Radio Market (Moscow) | Student Intern
1998 – 2000

- Assisted in assembling and transporting computer components.
- Upgraded and customized PCs.
- Gained early experience in computer hardware.

ADVANCED TECHNICAL PROFILE

SYSTEM ARCHITECTURE & SCALABLE INFRASTRUCTURE

Senior engineer with 16+ years designing production systems across Web platforms, Web3 infrastructure, financial applications, and real-time environments.

- Architected distributed backend systems handling 100K+ concurrent users and high-throughput workloads
- Designed event-driven and asynchronous services with real-time state synchronization
- Built API-first and microservices architectures with strong separation of concerns
- Reduced system latency by up to 30% through profiling and bottleneck isolation
- Designed database schemas and optimized complex queries across SQL and NoSQL systems
- Reliability-focused system design with failure-mode analysis and resilience patterns
- Designed systems with explicit consistency, reliability, and scalability trade-offs under real-world constraints.

AI SYSTEMS, GPU WORKLOADS & MODEL DEPLOYMENT

- Implemented GPU-accelerated inference pipelines optimized for parallel execution and compute efficiency under production constraints.
- Designed structured evaluation frameworks with metric tracking, regression detection, and latency benchmarking for model validation.
- Built data preprocessing and transformation pipelines for structured and semi-structured datasets
- Designed scalable model deployment architectures using containerized inference services and API exposure.
- Performance monitoring and iterative optimization of inference systems
- Built scalable inference services exposing REST APIs with monitoring of throughput, latency, and resource utilization.

BLOCKCHAIN & PROTOCOL ENGINEERING

- Production-grade smart contract development (Solidity, Rust) with security-first architecture
- EVM-compatible chains, Solana ecosystem, cross-chain integrations
- Designed token logic, staking mechanisms, and transaction validation flows
- Implemented secure wallet authentication and signature verification pipelines
- Built decentralized systems supporting high transaction volumes
- DoraHacks winner (Solana ecosystem) for blockchain innovation

LARGE DATA PIPELINES & COMPUTATIONAL SYSTEMS

- Designed and optimized large-scale data processing pipelines
- Implemented deterministic financial and algorithmic execution logic
- Built automation and modeling systems using Python-based tooling
- Managed compute-intensive backend processes under constrained performance budgets
- Developed real-time streaming architectures for high-frequency state updates

MISSION-CRITICAL & SECURITY-FOCUSED ENGINEERING

- Designed systems requiring high availability and operational stability
- Security-by-design approach across backend and Web3 infrastructure
- Structured threat modeling and risk-aware architectural decisions
- Experience operating under ambiguity, designing solutions with incomplete information
- Systems integration across heterogeneous components and protocols
- Structured ambiguous and high-constraint problem spaces into deterministic, scalable system architectures.

ENGINEERING LEADERSHIP & REASONING

- Led architecture and delivery of complex production systems end-to-end
- Cross-functional collaboration across engineering, product, and stakeholders
- Strong reasoning under ambiguity and constraint-driven decision-making
- Physics-based, mathematical, and systems-engineering mindset
- Emphasis on clarity, measurable impact, and long-term maintainability
